

Pebble Rubble

Front Design, 2022

Pebble Rubble finds inspiration from a meticulous naturalistic investigation of forms found in nature. Rocks, moss, fallen trees and bodies of water become, in the designers' imagination, places to rest and relax. Scanned in 3D, these organic forms are transformed into furniture objects that express, first and foremost, a sensory experience.

A pleasant illusion that attracts and intrigues by altering our perception of time: fast and frenetic that of everyday life, slow and inscrutable that of nature.

- A** Polimex[®] structure and polyurethane foam with differentiated densities
- B** Polyurethane foam with differentiated densities
- C** Wooden and wooden-derived base with belted seat

Backseat Structure	Polimex [®] structure and flexible polyurethane with differentiated densities.
Seat Structure	Elements: wooden and wooden-derived base with belted seat and flexible polyurethane with differentiated densities. Glides in black polypropylene screwed to the structure. Footstools: Polimex[®] structure and flexible polyurethane with differentiated densities. Lower black cover made of recyclable PVC. Black polypropylene feet with felt glides.
Seat Height	Without applied load: 42 cm.
Upholstery	The Pebble Rubble collection is highly configurable: it is possible to select different fabrics by type, category, and color for each part — seat and singlebackrests — of all the elements. For the recommended fabrics see the table on pages 14-17. Leather versions are NOT available. The collection has removable covers with the exception of the footstools.
Composability	All the elements can be used either freestanding or as part of compositions, except for code EC4 that must always be included in a composition, that is NOT a freestanding element. When used together, the elements can form “free” compositions, where the elements remain freely alignable and movable, or “linked” compositions with predefined layouts, since the elements, based on their form and structure, are designed to be joined only at specific spots and positions — see on pages 9-12. The connection sets are separately sold.

COMPOSABILITY

When used together, the elements can form “linked” compositions with predefined layouts, since the elements, based on their form and structure, are designed to be joined only at specific spots and positions (see previous pages).

Or they can form “free” compositions, where the elements remain freely alignable and movable, as pictured on this photograph.
